

TOROSO SECTOR OPPORTUNITY PORTFOLIO
GROWTH STRATEGY

OBJECTIVE

To outperform the S&P 500 Index over a full market cycle while maintaining lower volatility than the market.

DESIGNED FOR INVESTORS SEEKING

- Capital appreciation through a diversified portfolio of stocks
- Lower volatility than the broader U.S. equities market
- Liquid alternative that provides true non-correlation value

ETF-FOCUSED APPROACH

The strategy offers investors the ability to strategically invest in both a broadly diversified portfolio of U.S. stocks and a volatility hedging method that uses a carefully-selected group of ETFs (Exchange-Traded Funds).

GROWTH OF \$100,000

GROWTH

GOAL = ENHANCED US EQUITY
ALPHA = 2.80 BETA = 0.71

Worst Quarter	-9.72	-19.60

METHODOLOGY

We strive to quantitatively select superior sectors, those better positioned to outperform the market, using a proprietary scoring methodology for 80% of the portfolio, while allocating the remaining 20% to volatility based ETFs using historical and forward-looking market volatility trends. Through tactical rebalancing, this volatility component strives to opportunistically enhance up and down market capture, or collect the implied volatility premium during sideways markets.

US SECTORS APPROACH

1 | Identify Sectors

- Score and rank each sector for implied volatility conditions, passive influence, obsolescence exposure, active influence and efficiency.

2 | Select ETFs

- Current opportunity set includes 11 sectors and more than 70 sub-sector and thematic ETFs

VOLATILITY APPROACH

1 | Determine Market Risk Premium by looking at:

- Implied volatility futures curve shape
- Expanding or contracting economic conditions

2 | Select ETFs

- Using volatility ETFs, position this part of the portfolio to capture alpha in bull markets or protect principal in bear markets
- Current opportunity set of 10 ETFs is available

DISCLAIMER

This document does not make an offer or solicitation to buy or sell any securities or services and is not investment advice. Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Growth stocks can perform differently from other types of stocks and the market as a whole and can be more volatile than other types of stocks. Securities selected using quantitative analysis can perform differently from the market as a whole. The securities of smaller, less well-known companies can be more volatile than those of larger companies. Toroso Sector Opportunity SMA (SMA Models) are made available to clients on a non-discretionary basis by our unaffiliated distributor, a registered broker-dealer, as a provider of the SMA Models. The broker dealer(s) are not acting as a fiduciary or in any advisory capacity in providing this information to you. The information is designed to be utilized by you solely as a resource, along with other potential sources, in providing advisory services to your clients. You are solely responsible for determining whether the SMA Models and the investments included in the SMA Models, are appropriate and suitable for you to base a recommendation or provide advice to any end investor about the potential use of the SMA Models. Securities used in a strategy may include, but are not limited to, ETFs, closed end funds, open end mutual funds, common or preferred stock, convertible stocks or bonds, warrants, and rights as well as corporate, municipal, or government bonds, notes or bills. We may also recommend allocating portions of your account into a Separately Managed Account. The Sectors Opportunities SMA uses ETFs and mutual funds as part of an asset allocation model as described above in this section. In addition, SMAs may be used to provide diversification or specialization within a particular sector of the market. Due to the direct equity ownership, SMAs have risks including but not limited to market risk, credit risk, interest rate risk, prepayment risk, liquidity risk, sector risk, currency risk, and commodity risk.

PLEASE NOTE THAT PAST PERFORMANCE IS NO GUARANTEE OF FUTURE RESULTS.

DISCLOSURES

Information provided in this document is for informational and educational purposes only. To the extent any investment information in this material is deemed to be a recommendation, it is not meant to be impartial investment advice or advice in a fiduciary capacity and is not intended to be used as a primary basis for you or your client's investment decisions. Toroso and its representatives may have a conflict of interest in the products or services mentioned in this material because they have a financial interest in them, and receive compensation, directly or indirectly, in connection with the management, distribution, and/or servicing of these products or services, including Toroso funds, certain third-party funds and products, and certain investment services. Registered investment products (including mutual funds and ETFs) and collective investment trusts managed by Toroso are offered by certain unaffiliated distributor which are registered broker-dealers. Toroso investment management services and products are managed by the Toroso, a U.S. registered investment advisor. Before investing you should consider the funds or have your client consider the funds', exchange traded products' investment objectives, risks, charges, and expenses. Contact Toroso for a prospectus or a summary prospectus, if available, containing this information. Have your client read it carefully.

DISCLOSURES CONTINUED

The Toroso Strategy is subject to underlying expenses such as the annual expense ratios of the Exchange-Traded Products (ETPs) used to construct the portfolio, which generally include an embedded investment management fee paid to the investment adviser of the ETP. In addition, trading and transaction fees and other expenses such as custody and clearing are incurred in the management of the Sector Opportunities Portfolio. The market price for a share of an ETP may fluctuate from the value of its underlying securities. Consequently, ETPs can trade at a discount or premium to their net asset value. Certain equity and commodity ETPs are often more volatile and less liquid and present greater risks of loss of capital. Furthermore, certain ETPs employ strategies such as leverage or have the investment goal of performing opposite to a particular benchmark and may not be suitable for investment periods longer than one day due to the high volatility in their market price. Investments in fixed income ETPs are subject to the risks associated with debt securities including credit risk and interest rate risk.

The Gross and Net Returns presented reflects the composite performance of all actual Toroso accounts managed in accordance with such strategy for the entire calendar month and is calculated using a time-weighted total return methodology. The Gross and Net Returns for the strategy reflect expenses such as commissions and other brokerage fees and transaction costs, as well as the reinvestment of dividends and other earnings. The Net Returns for the strategy is stated after (net) the deduction of Toroso management fees, which may be found in ADV Form 2A. The investment process described above reflects Toroso's ongoing efforts to monitor and manage various risks in the clients' portfolios, but does not imply, and no representation is made, that client portfolios are low risk. The investment strategy presented and/or discussed may not be suitable for all types of prospective investors or clients and Toroso Investments, LLC's investment advisory services may not be available in all states or countries. All investing involves risk, including the possible loss of all principal invested. The information and statements presented above should not be construed as investment advice and should not be relied upon solely as the basis for evaluating the investment strategies presented or Toroso Investments, LLC's advisory services. Prospective clients should perform an independent review of all facts and information prior to making a determination as to whether Toroso Investments, LLC's advisory services are appropriate for them based on their individual circumstances. Registration with the SEC does not imply a certain level of skill or training.

DEFINITIONS

Alpha is an indication of how much an investment outperforms or underperforms on a risk-adjusted basis relative to its benchmark. Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. A beta of 1 indicates that the security's price will move with the market. A beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 indicates that the security's price will be more volatile than the market. The Sharpe Ratio is a measure for calculating risk-adjusted return. Generally, the greater the value of the Sharpe ratio, the more attractive the risk-adjusted return. Risk is measure of the standard deviation which is a measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard Deviation is calculated as the square root of variance. Current Yield is the income return on an investment.

BENCHMARKS

The benchmarks shown were selected due to their composite makeup and represent, based on Toroso's experience, the best indication for relative performance comparison. The indices are widely recognized and accepted industry indices which consists of a managed or unmanaged pool of securities. The indices are typically rebalanced on a monthly or quarterly basis, may or may not include the re-investment of dividends and typically are gross of any assumed trading costs or management fees or other assumed occurred expenses. When figures are included returns may be less than stated. It is not possible to invest directly in an index and an index does not incur the transaction costs that the investment strategy does. Please note that there may be material differences between the benchmark (index) and the investment strategies in terms of their composition, including, but not limited to level of diversification and exposure and amount of exposure to certain types of investments such as commodities or foreign equities; and their level of risk, as measured by volatility and/or other methods. The S&P 500 Index measures the performance of 500 widely held stocks in US equity market. It is a market-cap weighted index. Bloomberg Barclays Aggregate Bond Index is a market value-weighted index that tracks the daily price, coupon, pay-downs, and total return performance of fixed-rate, publicly placed, dollar-denominated, and nonconvertible investment grade debt issues with at least \$250 million par amount outstanding and with at least one year to final maturity.
